## Mod Kits Trill Tremolo

\$44

This handwired kit requires some skill with a soldering iron, but done right, it's a sweet sounding tremolo with a rich, chewy sound over a fairly wide range of speeds. There's a slight amount of boost when you kick it on that keeps the effect present in the mix, and the Depth and Speed controls react predictably, though the latter knob takes a moment to "catch up" when you quickly turn it from low to higher speed (or vice versa). A bypass LED would be a handy addition, but otherwise it's a great pedal for DIY tremsters. [modkitsdiy.com](http://modkitsdiy.com) —AT
